### Young Engineer of the Year Award 2006 - Ir Jenny F YEUNG

In line with the overwhelming response of the Young Engineer of the Year Award in previous years, the HKIE is pleased to organise the Young Engineer of the Year Award 2006. It was glad that all candidates have had significant contributions and outstanding achievements to the profession, to the community of Hong Kong and to the HKIE. The selection process has been competitive, hence the decision on the selection has never been easy for the Panel of Judges. This year, the Award goes to Ir Jenny F Yeung.

Being the Geotechnical Engineer of the Geotechnical Engineering Office of Civil Engineering and Development Department, Ir Yeung has devoted herself in the slope safety of Hong Kong. She exercises geotechnical control over construction projects, provides expert advices to the Government and responds to public enquires on slope safety and geotechnical issues. Striving for professional development, she attained an MPhil from the Cambridge University.

Ir Yeung's dedication to the HKIE dated back to 1993. She has taken up key posts in the Young Members Committee, and an active role in various Committees. She was awarded the Trainee of the Year by the HKIE in 1997. Ir Yeung has also devoted her time to community services. She spares no efforts and pays regular visits to the orphaned children on the Mainland.

Ir Yeung has made commendable contribution as engineers through involvement in engineering and community affairs to the continuous development of Hong Kong. It is hope that Ir Yeung can serve as the role model to encourage young engineers for life-long learning and to get themselves actively involved in the services of the community and engineering profession.

Ir Dr Greg Wong presented the award to Ir Jenny F Yeung (R)
