Young Engineer of the Year Award 2007 - Ir Carmen AU Ka-man

In line with the overwhelming response of the Young Engineer of the Year Award in previous years, the HKIE is pleased to organise the Young Engineer of the Year Award 2007. It was glad that all candidates have had significant contributions and outstanding achievements to the profession, to the community of Hong Kong and to the HKIE. The selection process has been competitive, hence the decision on the selection has never been easy for the Panel of Judges. This year, the Award goes to Ir Carmen K M Au.

Graduating from the University of Hong Kong, with a First Class Honour Degree in Civil & Structural Engineering, Ir Carmen Au has been working in large-scale highway and infrastructure projects for nearly a decade. She is currently a senior engineer at Maunsell AECOM. Striving for continuous learning in her engineering profession, Ir Au was conferred with a Distinction in Master of Science.

Ir Au has made commendable contribution as engineers through involvement in engineering and community affairs. She is one of the founding members of the China Care Fund, an organisation that re-constructs broken school buildings and provides educational assistance to students in the poverty stricken villages and remote mountainous regions of the Mainland. Ir Au also devoted herself in alumni association for young engineers by organising career talks, graduate mentorship scheme and overseas field trips. She is eager to share her professional knowledge and experience with youngsters with an aim to broaden the horizons of the younger generation. It is certain that Ir Au can serve as the role model to encourage young engineers for life-long learning and to get themselves actively involved in the services of the community and engineering profession.

This year, three young members Ir Johnny C H Chan, Ir Wilton W T Fok and Ir Kylie N Y Lam were also presented the Certificate of Merit.
