Achieving Net Zero: The Role of Mitigation

The challenges and impacts of climate change are increasingly imminent. Governments, investors and companies worldwide are working towards ambitious decarbonisation plans and net-zero carbon targets. However, due to various technological and financial constraints, achieving net-zero is not as straightforward for some organisations.

On the journey to achieving net-zero, it is important to understand what exactly is 'net-zero', the practical mitigation options available, and develop a tailored net-zero carbon roadmap for the organisation.

This webinar brings together engineers, innovators and sustainability consultants to discuss:

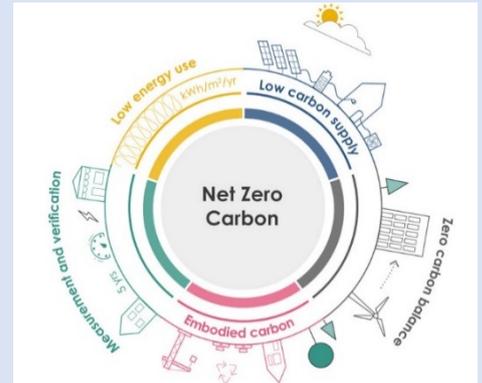

- How do we define and set the boundary for net-zero carbon targets?
- What are the potential mitigation options?
- What are the immediate next steps for companies to commit to net-zero carbon?

Speakers: Ms. Ding Li, Mr. Alan Hung & Ir Paul Chan

Ding Li is the Senior Strategy Consultant of Longevity Partners UK, leading the company's Global Strategy service. She advises clients on developing corporate sustainability strategies, policies, and action plans, including net-zero carbon targets and roadmaps.

Alan Hung is the Head of Strategy – Digital Products at CLP Innovation. Alan is responsible for leading the strategic initiatives that drive growth and organisational excellence to support CLP's innovation business and digital product development, covering smart energy service and decarbonisation solutions in multiple markets.

Paul Chan is currently the Chairman of HKIE Civil Division. Prior to his recent retirement, Ir Chan worked in CLP Innovation as the Senior Smart Building Manager, and was previously the Senior Project Manager of CLP Power Hong Kong. In addition to his extensive project management and technical experience in the civil and structural engineering field, he is very passionate in driving innovation and sustainable development in his career.
